

The **Linux Users' Group of Davis** presents:

 *Alice* is an innovative 3D programming environment that makes it easy to create an animation for telling a story, playing an interactive game, or a video to share on the web.

Alice is a freely available teaching tool designed to be a student's first exposure to object-oriented programming.  It allows students to learn fundamental programming concepts in the context of creating animated movies and simple video games.

In *Alice*, 3-D objects (e.g., people, animals, and vehicles) populate a virtual world and students create a program to animate the objects
