The *Linux Users' Group of Davis* presents:

Monday February 15, 2010 7pm – 9pm	Explorit Science Center 3141 5th Street Davis, CA 95616

Amazon Web Services are a collection of remote computing services offered over the Internet by Amazon.com.

They provide online services for other web sites or client-side applications. Most of these services are not exposed directly to end users, but instead offer functionality that other developers can use. Amazon Web Services' offerings are accessed over HTTP, using REST and SOAP protocols, and are billed on usage.

Learn how to leverage AWS to create Cloud-driven applications!

Free & open to the public!
