

The Linux Users' Group of Davis presents

KDE 3.2 - The K Desktop Environment A Users' Perspective

The K Desktop Environment continues to improve the functionality and usability of Linux on the desktop. From drag-and-drop CD audio ripping to instant messaging, KDE is among the many projects helping Linux become a viable system for most users' needs.

Advanced users can build upon the integrated system KDE provides by using tools like DCOP and Kdialog, while at the same time, the component-based architecture lets you pick and choose only the pieces of KDE you want to install.

Tuesday, April 6th
6:30pm – 9:00pm

Davis Public Library
315 East 14th St.
Davis, CA 95616
